INTRODUCTION

Read, understand, and comply with all following instructions. This guide must be kept available for reference at all times.

DISCLAIMER

Inasmuch as RJG, Inc. has no control over the use to which others may put this material, it does not guarantee that the same results as those described herein will be obtained. Nor does RJG, Inc. guarantee the effectiveness or safety of any possible or suggested design for articles of manufacture as illustrated herein by any photographs, technical drawings, and the like. Each user of the material or design or both should make his own tests to determine the suitability of the material or any material for the design as well as the suitability of the material, process, and/or design for his own particular use. Statements concerning possible or suggested uses of the material or designs described herein are not to be construed as constituting a license under any RJG, Inc. patent covering such use or as recommendations for use of such material or designs in the infringement of any patent.

PRIVACY

Designed and developed by RJG, Inc. Manual design, format and structure copyright 2022 RJG, Inc. content documentation copyright 2022 RJG, Inc. All rights reserved. Material contained herein may not be copied by hand, mechanical, or electronic means, either whole or in part, without the express written consent of RJG, Inc. Permission will normally be granted for use in conjunction with inter-company use not in conflict with RJG's best interests.

ALERTS

The following three alert types are used as needed to further clarify or highlight information presented in the manual:

-  **DEFINITION** *A definition or clarification of a term or terms used in the text.*
-  **NOTES** *A note provides additional information about a discussion topic.*
-  **CAUTION** *A caution is used to make the operator aware of conditions that can cause damage to equipment and/or injury to personnel.*

MAX	maximum
R.	radius

PRODUCT DESCRIPTION

The four-channel piezoelectric sensor connector with mold ID PZ-4 interfaces up to four piezoelectric sensors with the RJG, Inc. four-channel piezoelectric sensor adapter PZ/LX4F-S-ID and the eDART® or CoPilot® system.

APPLICATIONS

MULTI-CHANNEL PIEZOELECTRIC SENSOR SYSTEM

The Lynx™ multi-channel piezoelectric systems provide quick, convenient connection between multiple sensors in a mold to a single sensor adapter outside of the mold and the eDART or CoPilot system, saving real estate on the mold and minimizing cabling.

OPERATION

SENSOR CONNECTORS

The PZ-4 contains the necessary hardware to connect piezoelectric sensors and cables inside the mold to the piezoelectric sensor adapter and cable outside of the mold. The connector is a self-identifying device, enabling automatic recognition of the sensors and connector when connected to the eDART. The connector can withstand temperatures up to 392 °F (200 °C) MAX, with a Mold ID functionality MAX temperature of 257 °F (125 °C).

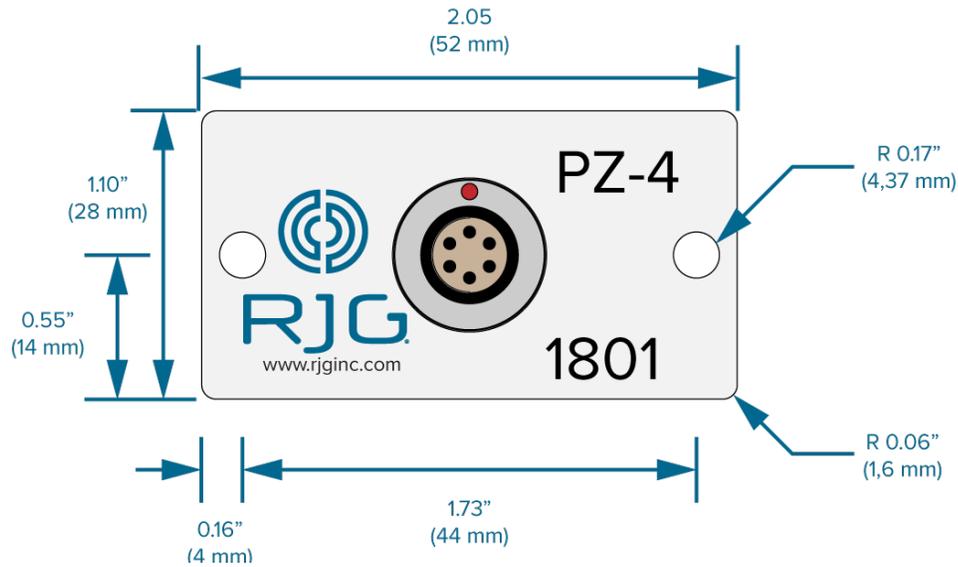

PIEZOELECTRIC SENSORS

Piezoelectric sensors use quartz crystals to measure the deformation, or change in resistance, of the force over the sensor. The measurement is carried through the sensor cable to a sensor connector mounted on the outside of the mold.

The sensor connector is connected to a sensor adapter, which is then connected to the RJG, Inc. eDART system. The eDART and CoPilot systems record and display the sensor's measurement for operator aid in process monitoring and control.

DIMENSIONS

CABLE LENGTHS

Lengths must be longer than needed to facilitate safe installation and removal of connector from tool to prevent tension on the lead wire; generally, 2–3" (50–75 mm)

of slack is sufficient. Use good sense to determine the appropriate cable length required for each application.

INSTALLATION

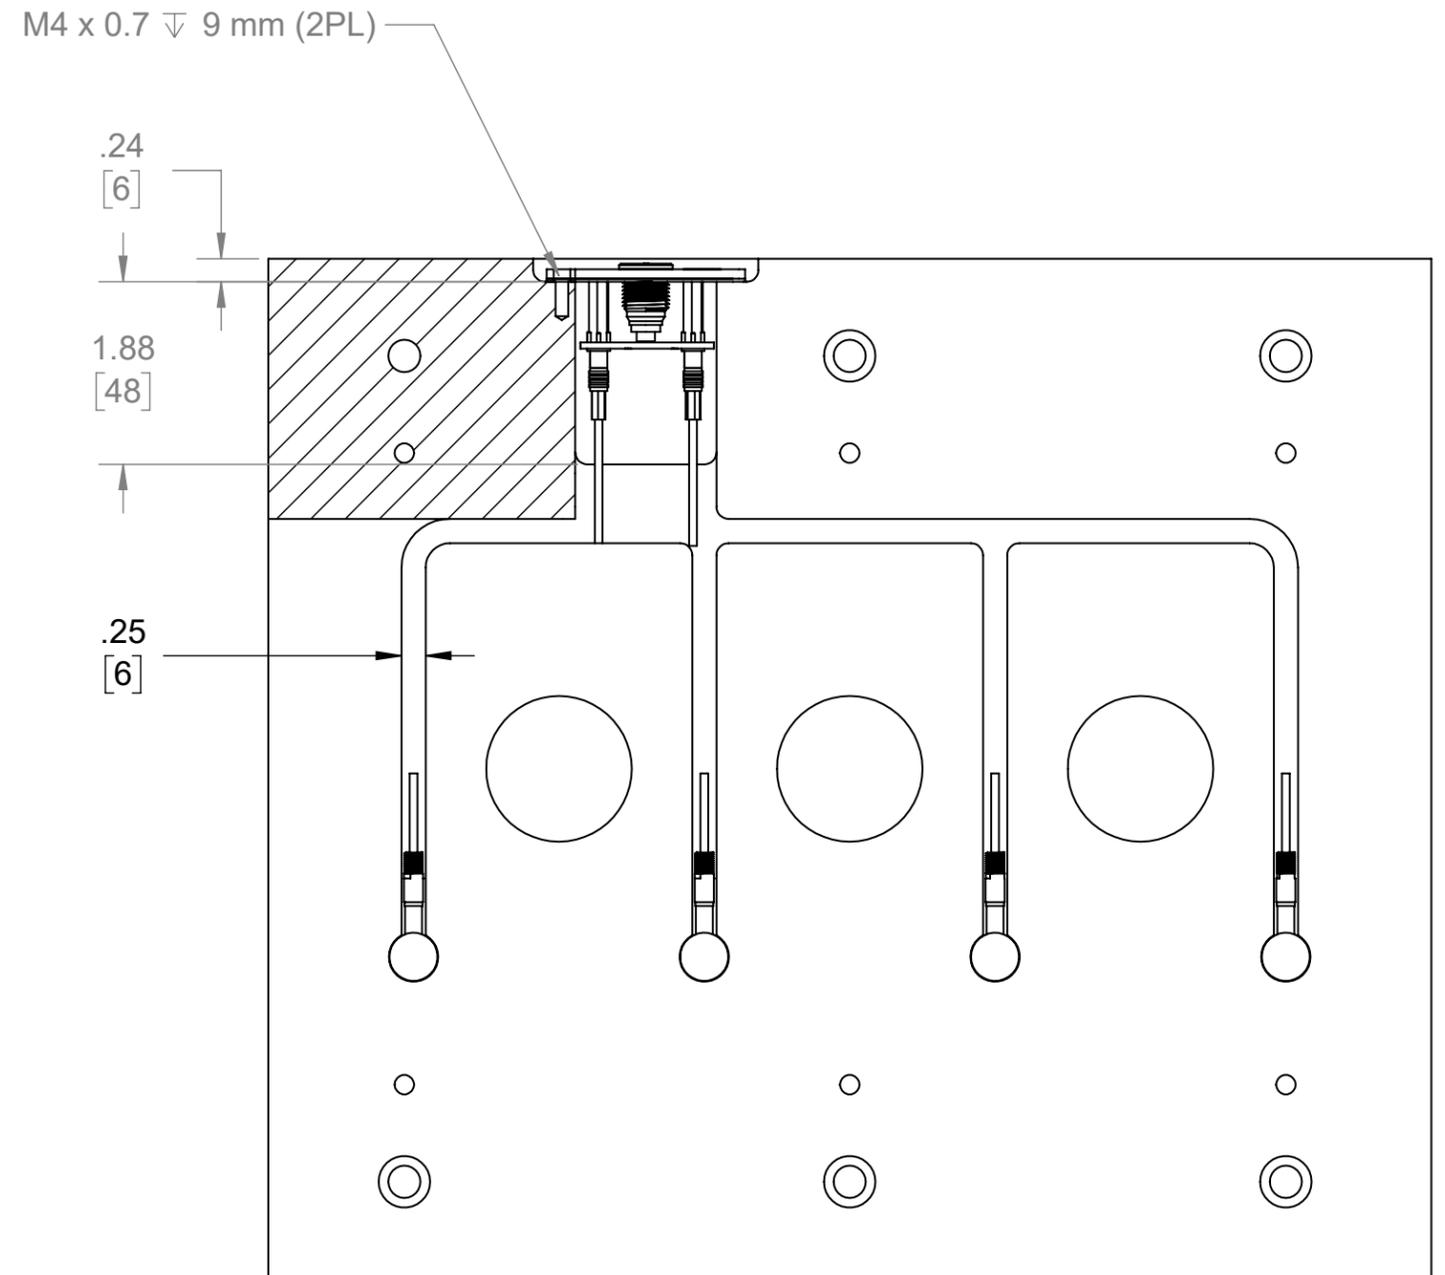

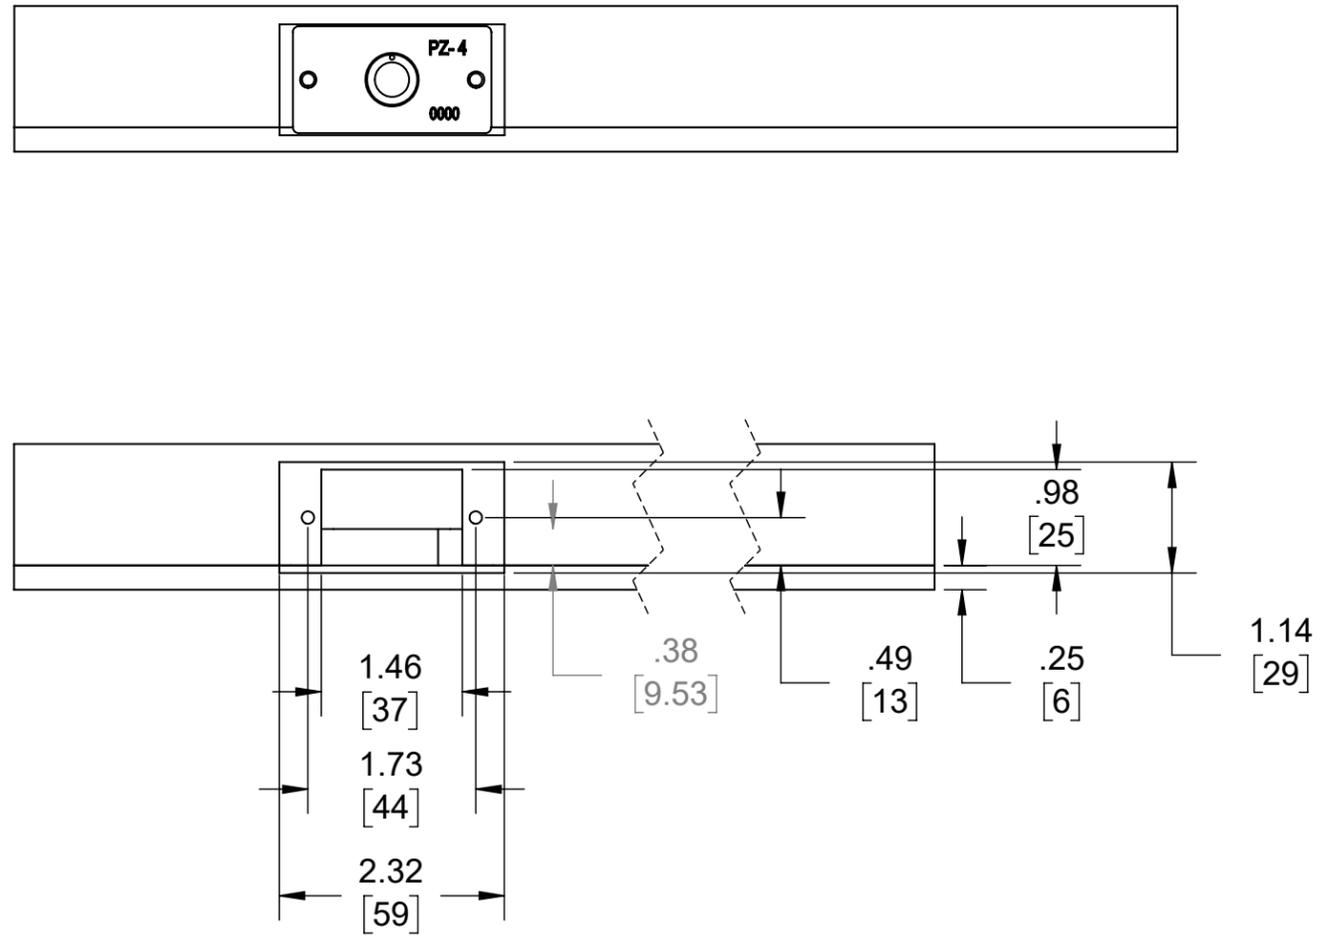

INSTALLATION OVERVIEW

A pocket is machined into the mold clamp and cover plates, in conjunction with sensor pockets and cable channels for the sensor connector (refer to piezoelectric sensor product manuals for sensor and cable installation). The connector is installed in the pocket where the sensor

cables, C-PZ/1645, are able to connect to the back of the connector plate. A separate cable, C-PZ/LX4F-S, is installed on the connector outside of the mold, and joins the connector to the sensor adapter PZ/LX4F-S-ID, which is attached to the eDART or CoPilot system.

INSTALLATION SPECIFICATIONS

INSTALLATION SPECIFICATIONS (continued)

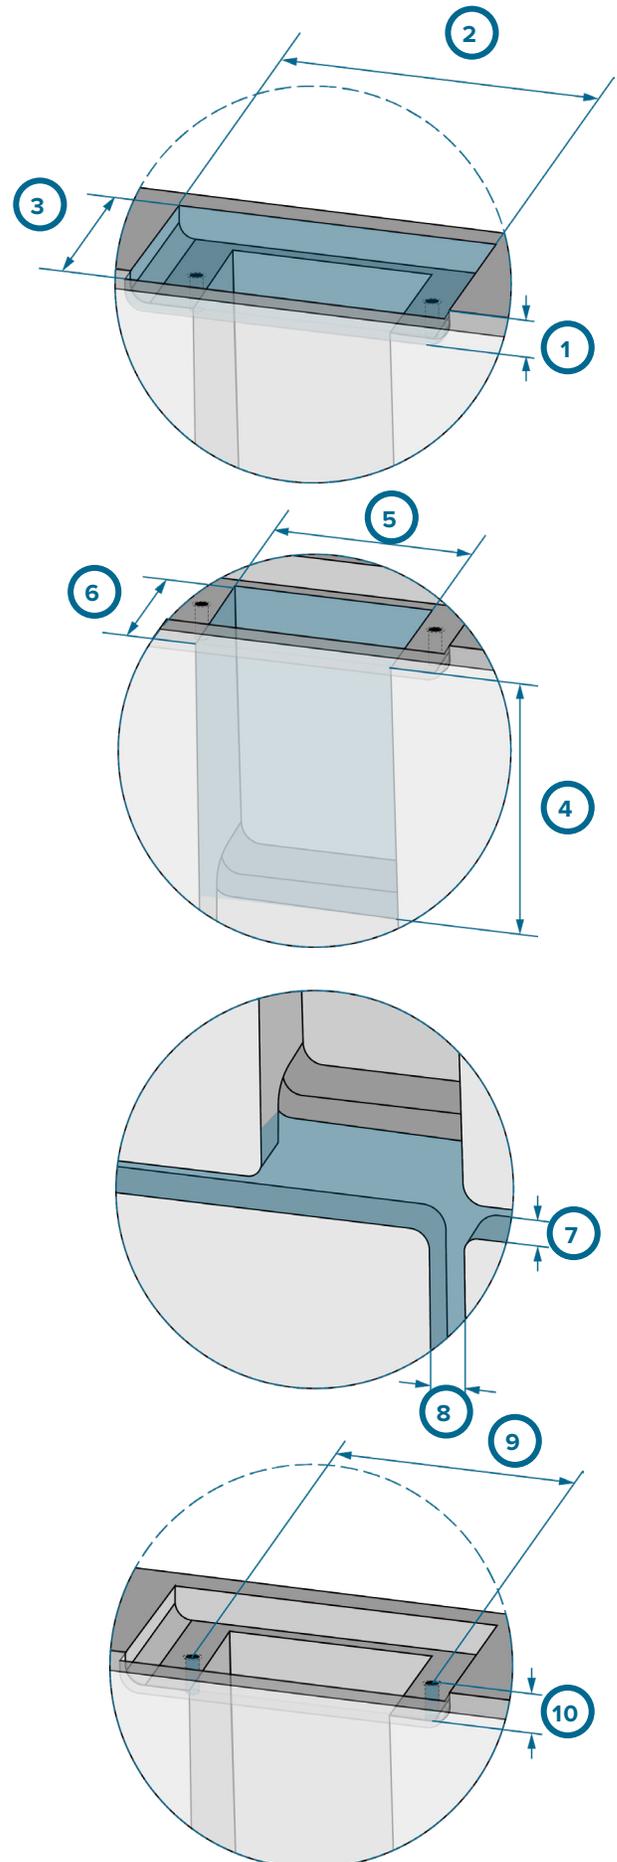

CONNECTOR POCKET

Machine a pocket for the connector into the mold clamp and cover plates. The PZ-4 plate requires a pocket 2.32" (59 mm) wide by 1.14" (29 mm) deep for the outer connection side—optionally, it may be recessed into the clamp and cover plate 0.24" (6 mm [1–3 at right]).

The PZ-4 plate requires a pocket of 1.88" (48 mm) MIN high, by 1.46" (37 mm) wide, by 1.06" (27 mm) deep for the inner, sensor-connections-side (4–6 at right) in the clamp plate.

In addition, the remaining cable channels below the specified, inner-connection-pocket in the clamp plate must be 0.38" (9,53 mm) deep by 0.25" (6,35 mm) wide to the sensor head (7–8 at right).

Drill and tap in two locations 1.73" (44 mm) on center in the connector pocket (in the clamp plate) for the included M4 socket head cap screws 0.35" (9 mm [9–10 at right]) deep.

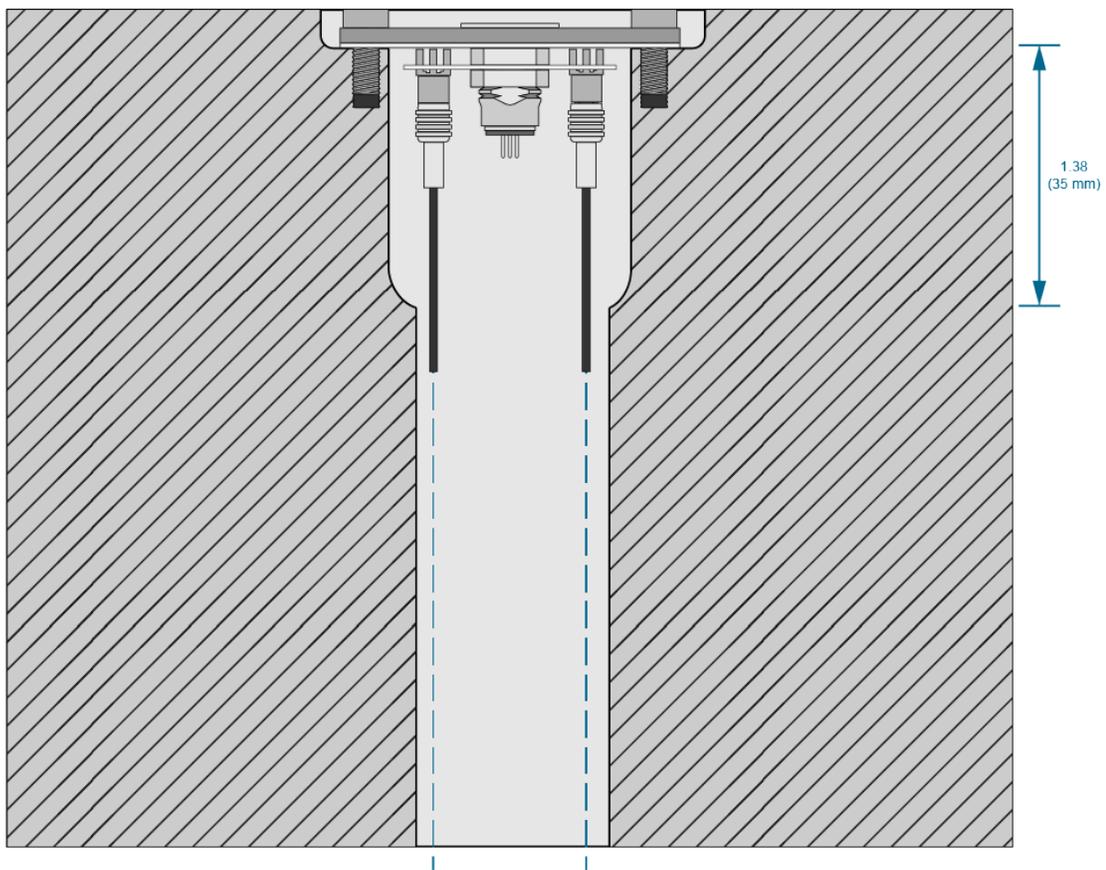

1	0.24" (6 mm) (optional)
2	2.32" (59 mm)
3	1.14" (29 mm)
4	1.88" MIN (48 mm)
5	1.46" (37 mm)
6	1.06" (27 mm)
7	0.38" (9,53 mm)
8	0.25" (6,35 mm) MIN per cable
9	1.73" (44 mm)
10	0.35" (9 mm)

INSTALLATION OPTIONS

LEGACY FOUR-CHANNEL PIEZOELECTRIC SENSOR CONNECTOR PZ-4 INSTALLATION

The legacy four-channel piezoelectric sensor connector PZ-4, version one, requires a different pocket dimension than the previously described PZ-4 version two (refer to illustration below). If needed, a spacer is available for the legacy installation—contact RJG, Inc. Customer Support for more details.

CLEANING & DRIFT

REGULAR CLEANING

Pull sensors from the mold and clean out the pockets and channels when a mold is pulled for preventative maintenance. Sensors, connectors, and cables must be installed in areas free from oil, dirt, grime, and grease.

RJG, Inc. recommends the following cleaners:

- MicroCare MCC-CCC Contact Cleaner C
- MicroCare MCC-SPR SuprClean™
- Miller-Stephenson MS-730L Contact Re-Nu®

DRIFT

Piezoelectric sensors can drift negative (-) or positive (+). The acceptable drift specification for RJG piezoelectric sensors is 20 pC/minute. The easiest place to monitor this is the eDART “Sensor Locations” screen. Drift of ± 20 pC in sixty seconds indicates abnormal drift. The cause of “Drift” is dirty/contaminated connections. This could be any of the connections from the sensor to the eDART or CoPilot system.

Properly clean all connection points with an electronics grade contact cleaner. Allow the sensors and cables to air-dry before reconnecting them. Do not blow them out with a “shop” air line as this air usually contains oil and other contaminants.

If drift continues, clean the sensors out again with electronics grade cleaner then bake them in an oven to remove the contaminants (same method used at RJG). It is recommended to bake the sensors/cables at 212 °F (100 °C) for sixty minutes; bake the plate/adaptor at 140 °F (60 °C).

If continuing to experience drift after this, please contact RJG Sales for pricing and lead time on replacement items.

TESTING & CALIBRATION

The Four-Channel Piezoelectric Sensor Connector PZ-4 features high resolution and low drift ratings and requires no calibration. Follow all instructions and recommendations for individual sensor testing and calibration for optimal operation.

SENSOR TESTING

1. Sensor PreCheck

The Sensor PreCheck provides diagnostics on typical sensor problems such as sensor drift, preload, and zero shift, and can also detect sensor installation errors caused by improper pocket dimensions, damaged wires, and damaged sensor heads. A test report with sensor configuration can be emailed or printed from the device. This device allows testing of up to thirty-two sensors at one time and can verify that a force was applied to the sensor.

2. eDART Software—Raw Data Viewer

The eDART Raw Data Viewer displays the status of the sensor, either Valid, No Reply, Stale, or Invalid.

- A Valid sensor has raw counts that change when force is applied to the sensor; this indicates a properly working sensor.
- A No Reply sensor is not communicating with the eDART; the sensor may be unplugged.
- A Stale sensor indicates a sensor that is unused.
- An Invalid sensor will indicate a Failure of either Over-range (Ovrng) or Under-range (Undrng). The Ovrng indicates the sensor’s calibration has changed too far in a positive direction, outside of the upper specification. The Undrng indicates that the sensor’s calibration has changed too far in a negative direction, and the sensor may report a number below zero when load is applied.

WARRANTY

RJG, INC. STANDARD ONE-YEAR WARRANTY

RJG, Inc. is confident in the quality and robustness of the PZ-4, and so are offering a one-year warranty. RJG's multi-channel piezoelectric sensor connectors are guaranteed against defects in material and workmanship for one year from the original date of purchase. The warranty is void if it is determined that the product was subjected to abuse or neglect beyond the normal wear and tear of field use, or in the event the product has been opened by the customer.

PRODUCT DISCLAIMER

RJG, Inc. is not responsible for the improper installation of this equipment, or any other equipment RJG manufactures.

Proper RJG equipment installation does not interfere with original equipment safety features of the machine. Safety mechanisms on all machines should never be removed.

TROUBLESHOOTING

COMMON ERRORS

1. Slow sensor drift reading.

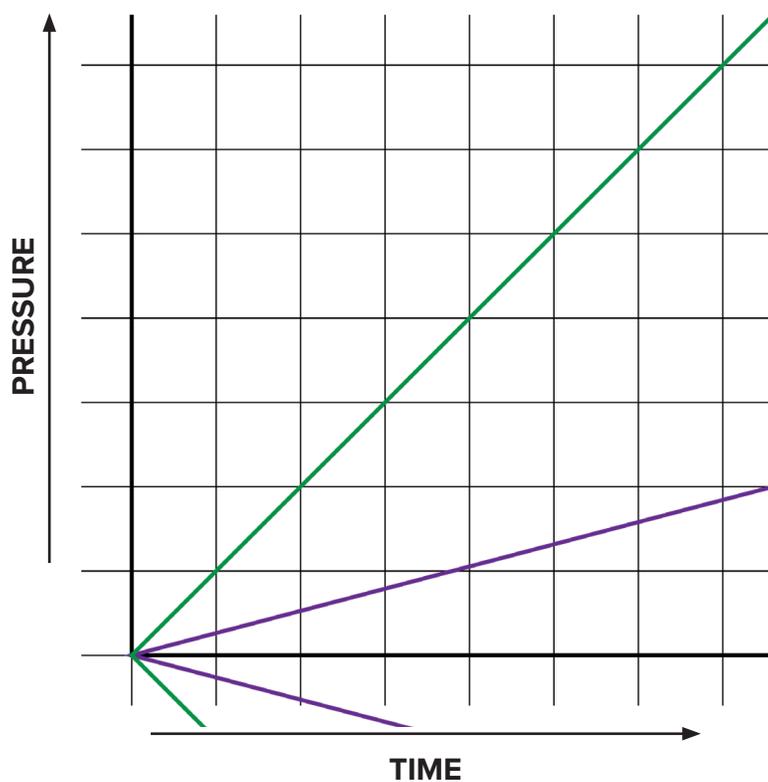

A sensor reading that slowly rises or falls (positive or negative) from the set zero value.

2. Fast sensor drift/invalid reading.

A sensor reading that quickly or rises or falls (positive or negative) from the set zero value, possibly so much that the reading becomes invalid.

3. No sensor to eDART/CoPilot system communication.

The sensor reading cannot be obtained by the eDART.

	Fast Drift/Invalid
	Slow Drift

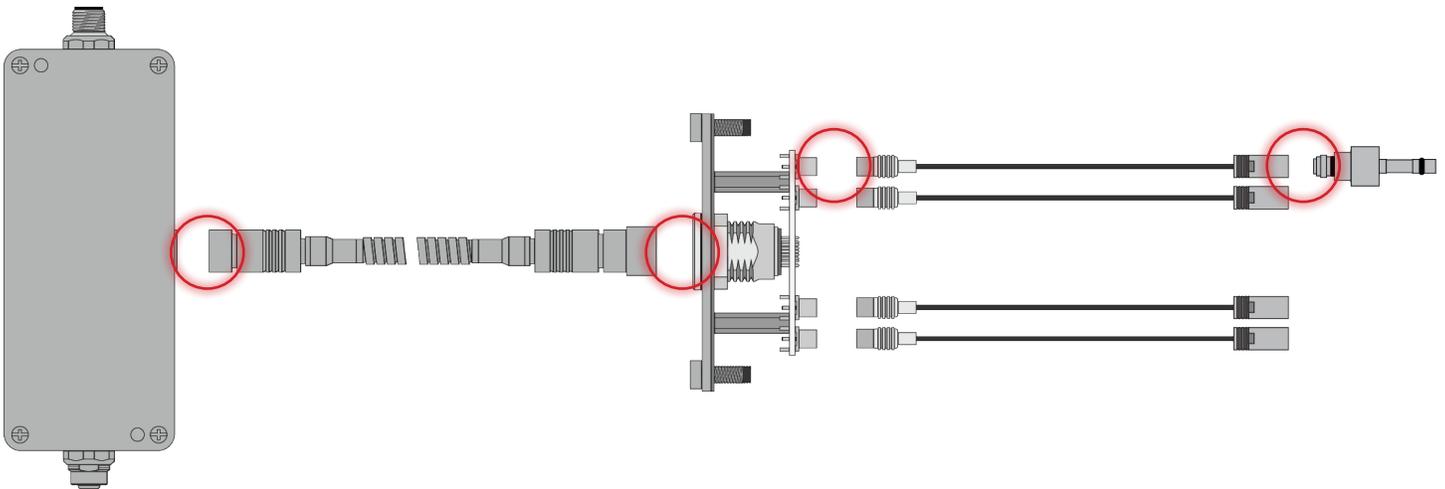

COMMON ERRORS *(continued)*

SLOW SENSOR DRIFT READING

If the sensor reading will not remain steady and drifts positive or negative, the sensor, cables, or adapter connectors may be contaminated. To identify the connector(s) with contamination, perform the following:

1. Disconnect the C-PZ/LX4F-S cable from the PZ/LX4F-S-ID and clean end and connector; if the reading continues to drift, continue to next step.
2. Disconnect the C-PZ/LX4F-S cable from the PZ-4 and clean end and connector; if the reading continues to drift, continue to next step.
3. Disconnect the C-PZ/1645 from the PZ-4 and clean ends; if the reading continues to drift, continue to next step.
4. Disconnect sensor from C-PZ/1645 cable and clean ends.

If the sensor reading continues to drift after the above troubleshooting steps are completed, either the sensor, cables, connector, or adapter must be replaced; contact RJG Customer Support.

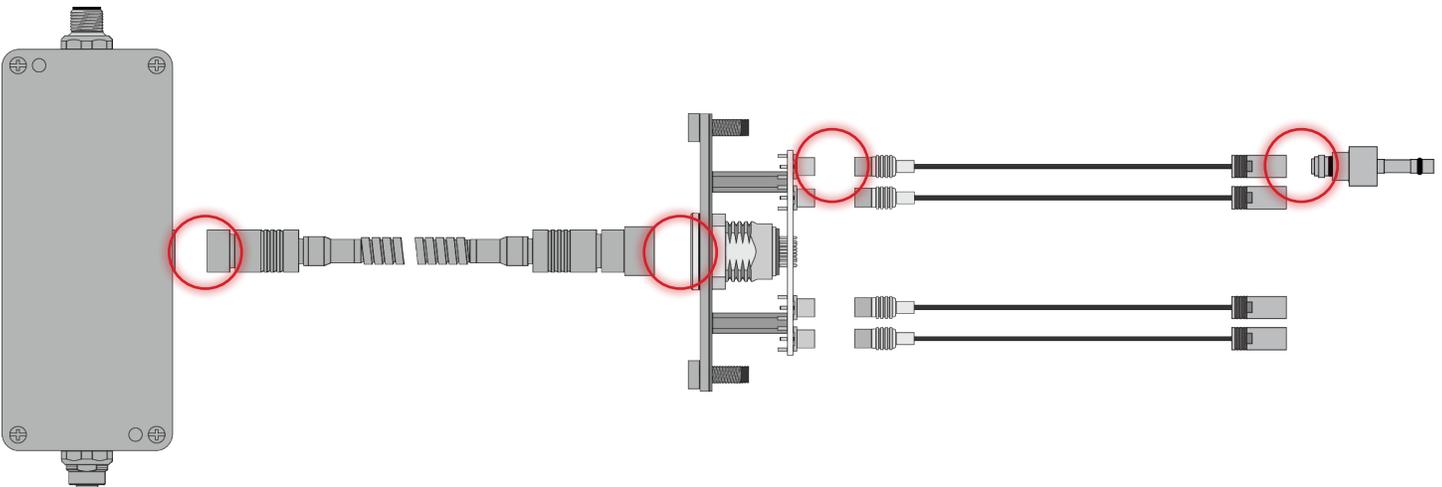

COMMON ERRORS (continued)

FAST SENSOR DRIFT/INVALID READING

If the sensor reading drifts quickly and becomes invalid, the sensor, cables, or adapter connectors may be heavily contaminated, or the adapter may have failed. To identify the connector(s) with contamination, perform the following:

1. Disconnect the C-PZ/LX4F-S cable from the PZ/LX4F-S-ID and clean end and connector; if the reading continues to drift, continue to next step.
2. Disconnect the C-PZ/LX4F-S cable from the PZ-4 and clean end and connector; if the reading continues to drift, continue to next step.
3. Disconnect the C-PZ/1645 from the PZ-4 and clean ends; if the reading continues to drift, continue to next step.
4. Disconnect sensor from C-PZ/1645 cable and clean ends.

If the sensor reading continues to drift or remains invalid after the above troubleshooting steps are completed the adapter must be replaced; contact RJG Customer Support.

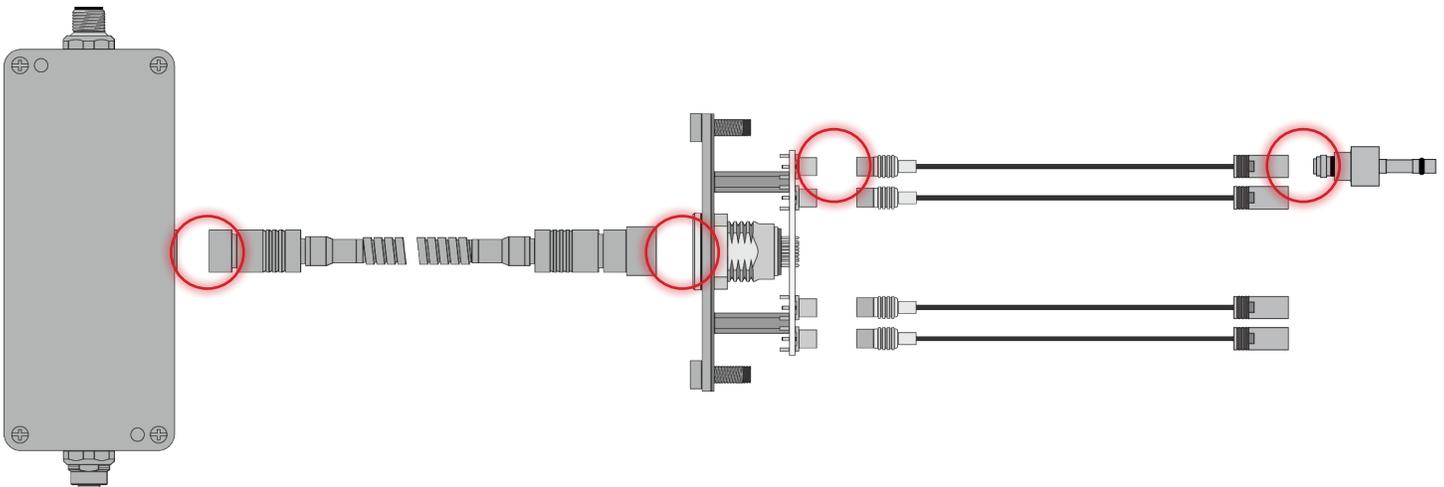

COMMON ERRORS *(continued)*

SENSOR DOES NOT COMMUNICATE WITH eDART OR COPILOT SYSTEM

If the eDART or CoPilot system is unable to establish communication with the sensor, the cables or adapter may have failed. To identify the failed component, perform the following;

1. Replace the CE-LX5 Lynx cable with working cable; test the sensor operation. If communication remains non-existent, continue to next step.
2. Replace the C-PZ/LX4F-S sensor adapter cable with working cable; test sensor operation. If communication remains non-existent, continue to next step.
3. Replace the C-PZ/1645 sensor cable with working cable; test sensor operation.

If the eDART or CoPilot system cannot establish communication after these steps, the connector has failed and must be replaced; contact RJG Customer Support.

RELATED PRODUCTS

The PZ-4 is compatible with other RJG, Inc. products for use with the eDART or CoPilot process control and monitoring systems.

COMPATIBLE PRODUCTS

MULTI-CHANNEL PIEZOELECTRIC SENSOR CONNECTOR CABLE C-PZ/1645

The C-PZ/1645 piezoelectric sensor cable (1 at right) is designed for use with the RJG, Inc. four and eight-channel piezoelectric sensor connectors PZ-4 and PZ-8 with mold ID. Up to four C-PZ/1645 cables can be used to interface sensors to the PZ-4.

FOUR-CHANNEL PIEZOELECTRIC SENSOR CONNECTOR TO ADAPTER CABLE C-PZ/LX4F-S

The C-PZ/LX4F-S four-channel piezoelectric sensor connector-to-adapter cable (2 at right) is designed for use with the RJG, Inc. four-channel piezoelectric adapter with mold ID PZ-LX4F-S-ID. One C-PZ/LX4F-S is required to interface the PZ-4 with the PZ/LX4F-S-ID and the eDART or CoPilot system.

LYNX FOUR-CHANNEL PIEZOELECTRIC SENSOR ADAPTER WITH MOLD ID PZ/LX4F-S-ID

The Lynx four-channel piezoelectric sensor adapter with mold ID PZ/LX4F-S-ID (3 at right) provides a quick, convenient connection between the RJG, Inc. four-channel piezoelectric sensor connector PZ-4 and the eDART or CoPilot system. The adapter accepts inputs from any piezoelectric sensor and identifies the connected mold.

SIMILAR PRODUCTS

EIGHT-CHANNEL PIEZOELECTRIC SENSOR CONNECTOR PZ-8

The eight-channel piezoelectric connector with mold ID PZ-8 (1) at right) is a connector that interfaces up to eight piezoelectric sensors with the RJG, Inc. eight-channel piezoelectric sensor adapter PZ/LX8F-S-ID and the eDART or CoPilot system.

LYNX™ EIGHT-CHANNEL PIEZOELECTRIC SENSOR ADAPTER PZ/LX8F-S-ID

The Lynx eight-channel piezoelectric sensor adapter with mold ID PZ/LX8F-S-ID (2) at right) provides a quick, convenient connection between the RJG, Inc. eight-channel piezoelectric sensor connector PZ-8 and the eDART or CoPilot system. The adapter accepts inputs from any piezoelectric sensor and identifies the connected mold.

EIGHT-CHANNEL PIEZOELECTRIC SENSOR CONNECTOR TO ADAPTER CABLE C-PZ/LX8F-S

The C-PZ/LX8F-S eight-channel piezoelectric sensor connector-to-adapter cable (3) at right) is designed for use with the RJG, Inc. eight-channel piezoelectric adapter with mold ID PZ/LX8F-S-ID. One C-PZ/LX8F-S is required to interface the PZ-8 with the PZ/LX8F-S-ID and the eDART or CoPilot system.
