

Easily Interface with Multiple Piezoelectric Sensors

The Piezoelectric Connector with Mold ID allows users to interface with up to eight RJG piezoelectric sensors while maintaining a small mold footprint. The unique cable connecting system allows for easy field replacement of cables and sensors with minimum nuisance or expense. The interface identifies sensors and molds on the eDART System™ so you can be sure you have the right mold running and the correct sensors selected.

Features and Benefits:

- Field replaceable cables
- Mold identifying with equipped multi-channel piezo adapters
- Can be used with our current sensors
- Minimal mold surface footprint
- Multiple sensors on one cable
