

Easily Interface to Multiple Piezoelectric Sensors

The Piezoelectric Connector with Mold ID allows users to interface up to eight RJG piezoelectric sensors while maintaining a small mold footprint. The unique cable connecting system allows for easy field replacement of cables and sensors with minimum nuisance and expense. The interface identifies the sensors and the mold to the eDART System,[™] so you can be sure you have the right mold running and the correct sensors selected.

Features:

- Field replaceable cables
- Mold identifying with equipped multi-channel piezo adapters
- Can be used with our current sensors
- Provides the minimum mold surface footprint
- Multiple sensors on one cable
